PROFILE

Full-stack developer and Master's student in social sciences (media & communication) at the University of Lausanne. I build web apps and AI-powered tools, and I get them online: eight are live right now, including a six-language code school that runs real engines in the browser through WebAssembly, and a companion app backed by a Postgres + pgvector memory. AI is part of how I work, the same way any developer leans on their tools. Native French & English; Swiss and American.

SELECTED PROJECTS

THE CONSTRUCT LIVE

A browser code school teaching six languages (Python, JS, TypeScript, SQL, Lua, Ruby), each running a **real engine via WebAssembly**. 96 verified exercises, live-graded in the browser.

floriansumi-bot.github.io/the-construct

Guillermo LIVE

A full-stack AI companion (Next.js, **Postgres + pgvector**) that forms lasting, searchable memories and runs autonomous background jobs, with real accounts and persistence.

guillermo-opal.vercel.app

SheetGenie LIVE

Turns a spoken or typed request into a real, downloadable Excel workbook with live formulas, charts, conditional formatting; reads data from photos & PDFs. JS + Python serverless.

sheetgenie.vercel.app

AdForge LIVE

A pipeline of **five specialised AI agents** that turns one product brief into finished ad creatives: copy, editable scenes, and an animated video with AI voiceover, all in-browser.

adforge-gamma.vercel.app

HyperFractal LIVE

A single-file **WebGL / Web Audio** VJ tool for live shows: ten audio-reactive visuals plus free-form projection mapping, no dependencies, runs in the browser.
